

The Weather Survey

Measuring wind speed Results

Take your anemometer outside and hold it up in an open space, where the wind is blowing. Use your stopwatch to time 60 seconds. Count the number of times your anemometer spins around. The faster your anemometer spins, the stronger the wind.

Location 1	Date	Number of spins	Mean average

Location 2	Date	Number of spins	Mean average

Location 3	Date	Number of spins	Mean average

Location 4	Date	Number of spins	Mean average

Location 5	Date	Number of spins	Mean average
